1.0 PROJECT INTRODUCTION

Animal welfare and pet adoption has become increasingly prevalent in our society. This is primarily due to the number of stray and abandoned pets that continue to grow at an alarming rate. Many animal rescue groups and shelters are being created every day in order to take in these pets, give them a safe and loving place to live, and then hopefully find them a new home with loving adopters. Unfortunately, many of the processes of pet adoptions, animal rescue awareness, and lost/found animals are still being manually processed or reported via social media, text message, or through some other form of an unstructured platform.

The Pet Adoption & Animal Rescue System was designed to offer a centralized web-based system for pet adoption, raising awareness about animal rescues and helping to document lost and found pets. Through this system, users will have the ability to view all pets for adoption, apply for the adoption of a pet, read and submit articles that raise awareness about animal rescues and report lost and found pets. The system will allow administrators to manage animals, review pet adoption applications, approve articles submitted for the purpose of raising awareness and managing lost and found reports more effectively.

By utilizing JSP (Java Server Pages) and the MVC (Model View Controller) architecture, this project intends to provide a better way to organize, store, access, and utilize the pet adoptions and animal rescue activities, while simultaneously making it easier and more effective for pet owners to be responsible.

2.0 PROBLEM STATEMENT

1. Unstructured Pet Adoption Process

Pet adoption information and applications are commonly managed through manual records or scattered online platforms, making it difficult for potential adopters to access updated pet information and for administrators to track adoption requests effectively.

2. Lack of Centralized Awareness and Reporting System

Rescue awareness articles and lost-and-found animal reports are not systematically managed, causing important information to be overlooked or lost and reducing public awareness and the success rate of rescue efforts.

3. Inefficient Administrative Management

Administrators face difficulties in managing pets, adoption requests, articles, and reports due to the absence of an integrated system, leading to increased workload, data inconsistency, and delayed decision-making.

3.0 OBJECTIVES

1. To develop a web-based system that provides a centralized platform for managing pet adoption and animal rescue activities.
2. To allow users to view available pets, submit adoption applications, and report lost or found animals in an organized manner.
3. To enable administrators to manage pet information, review adoption requests, and approve rescue awareness articles efficiently.

4.0 USER MANUAL

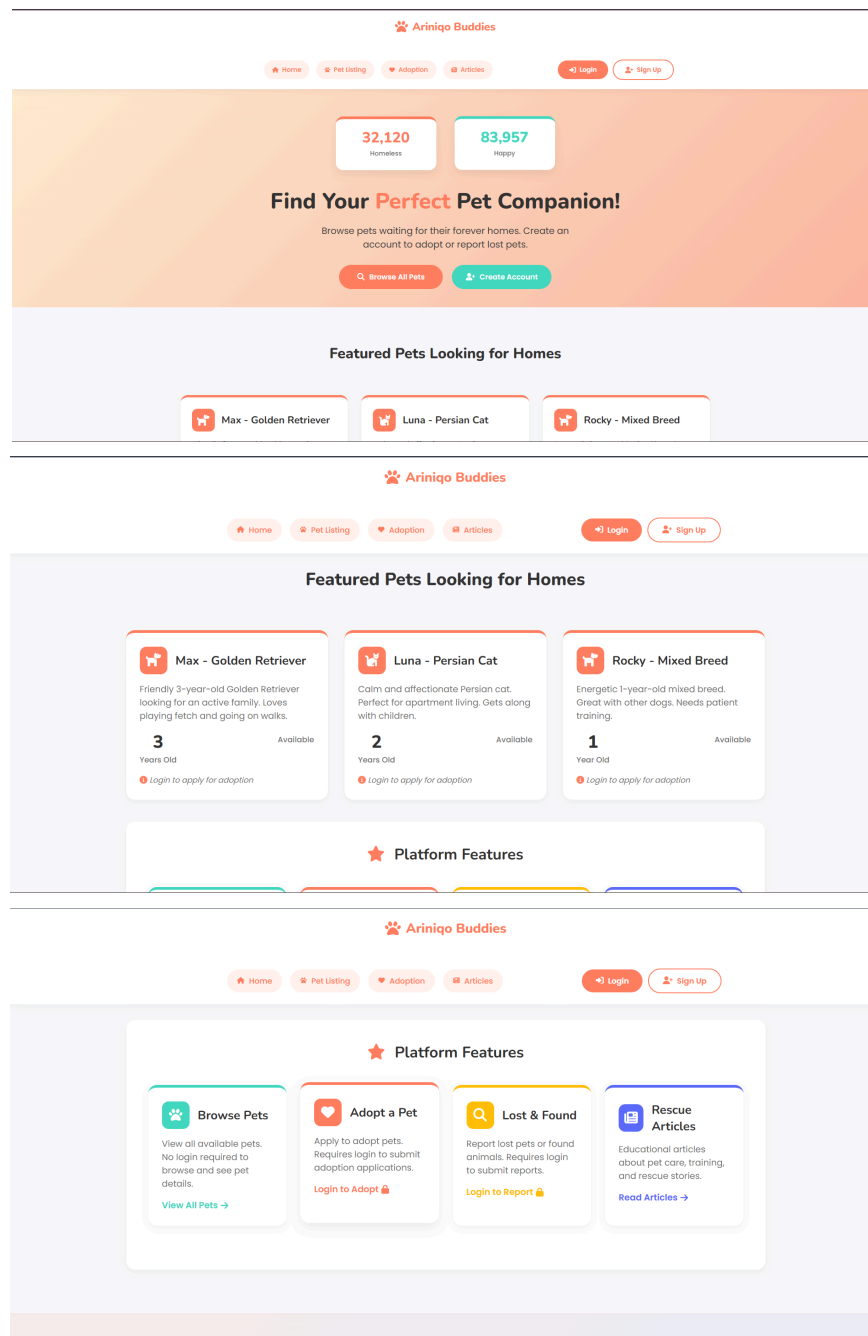

Figure 4.0.1 Dashboard page for all users

Based on Figure 4.0.1, the system functions as a centralized platform that replaces manual pet adoption and rescue processes with an organized digital interface. Key functions include a Pet Listing module where users can browse available animals like Max or Luna to view their age and breed, and an Adoption Application feature that allows registered users to submit requests directly through the site. Furthermore,

the dashboard provides a Lost & Found reporting tool to document missing pets and a Rescue Articles section for sharing awareness content. All these operations are secured by a Login and Sign Up function, ensuring that only authenticated users can perform sensitive tasks like reporting animals or applying for adoption.

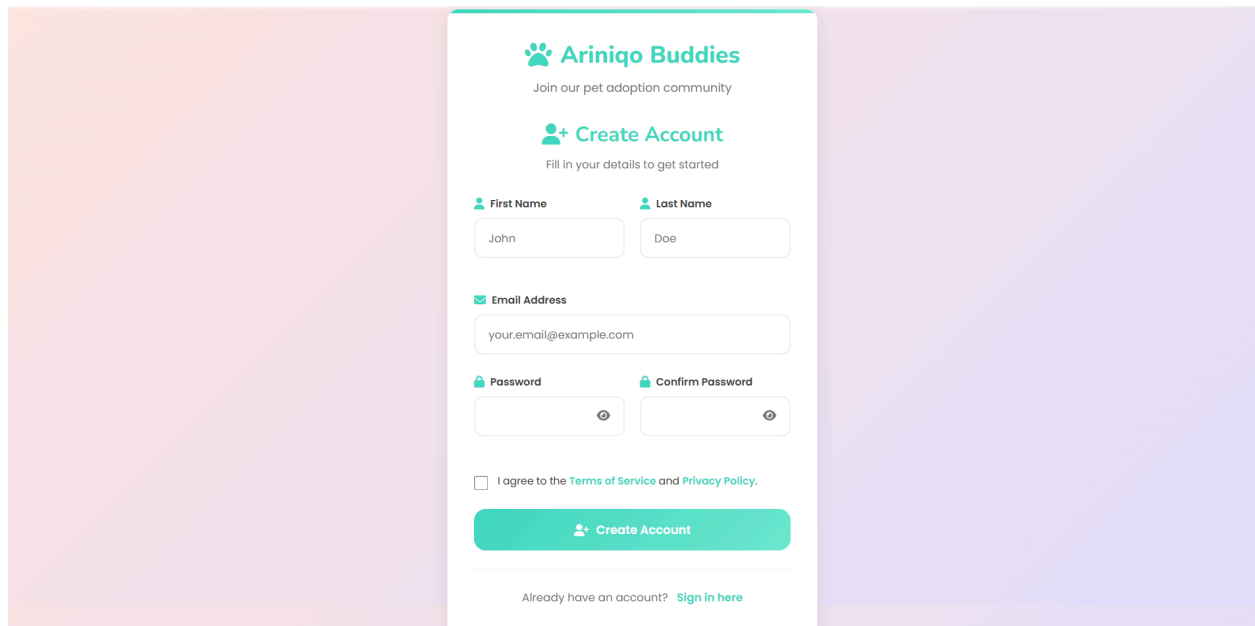

The image shows a web form for signing up to 'Arinigo Buddies'. The form is centered on a white background with a light blue border. At the top, it features the 'Arinigo Buddies' logo with a paw print icon and the tagline 'Join our pet adoption community'. Below this is a green '+ Create Account' button with the instruction 'Fill in your details to get started'. The form contains several input fields: 'First Name' (with 'John' entered), 'Last Name' (with 'Doe' entered), 'Email Address' (with 'your.email@example.com' entered), 'Password', and 'Confirm Password'. Each field has a small icon indicating its type (person for names, envelope for email, and lock for passwords). Below the password fields is a checkbox for 'I agree to the Terms of Service and Privacy Policy.' and a large green '+ Create Account' button. At the bottom, there is a link for 'Already have an account? Sign in here'.

Figure 4.0.2 Signup page for all users

The Signup Page shown in Figure 4.0.2 is designed to be the starting point for anyone who wants to join our pet adoption community. It makes it easy for new users to register by filling in a simple form with their First Name, Last Name, and Email Address, which helps us keep track of who is applying for pets or reporting lost animals. By including Password and Confirm Password fields, we make sure that every account is secure, and the Terms of Service checkbox ensures everyone follows the platform's rules.

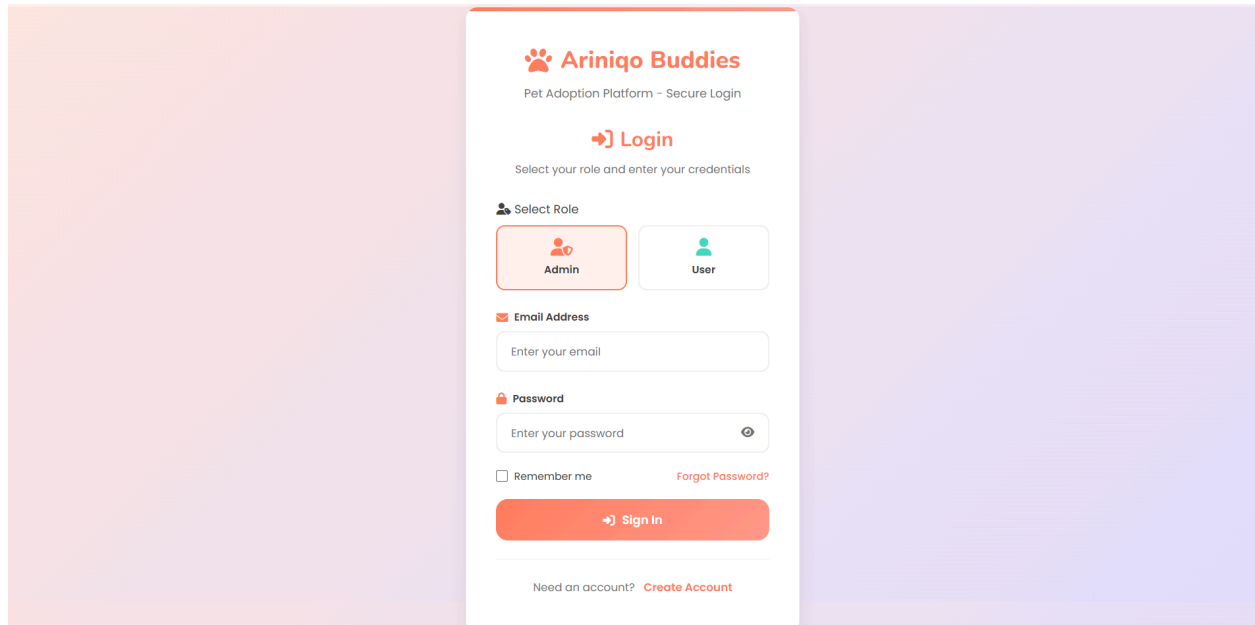

Figure 4.0.3 Login page for all users

The Login Page shown in Figure 4.0.3 is designed to be the main gateway for our system, where users have to choose their role as either an Admin or a User before they can sign in. This setup is really important because it makes sure that staff members get sent to the management tools while regular users go to the adoption and reporting pages, which solves the problem of having a disorganized system. To get into their account, users just need to enter their registered Email Address and Password. We also added a "Remember me" box to make it faster to log in next time and a "Forgot Password?" link just in case someone loses their login info.

4.1 ADOPTER PERSPECTIVE

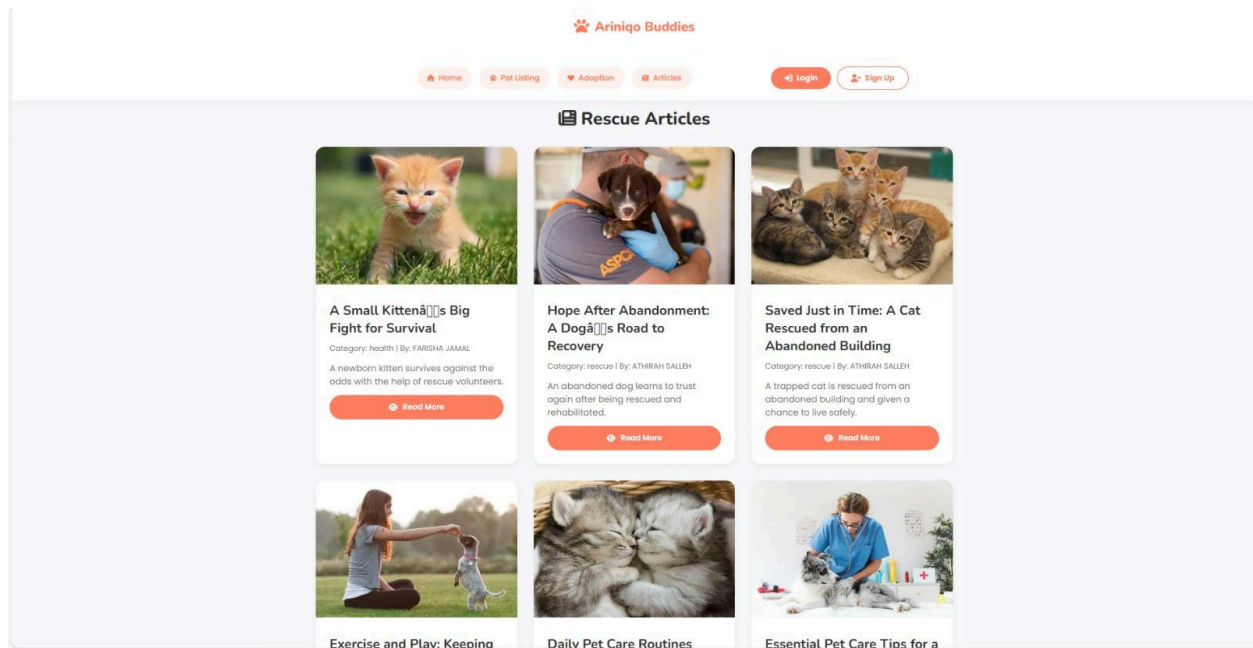

Figure 4.1.1 Page List of All Articles

The Rescue Articles page shown in Figure 4.1.1 is a key part of our platform where users can read and share stories to help raise awareness about animal rescue. This page is organized into easy-to-read cards that show the article title, category, and the author's name. By clicking the "Read More" button, users can access full educational tips on pet care or stories about pet, which helps meet our project's goal of educating the public.

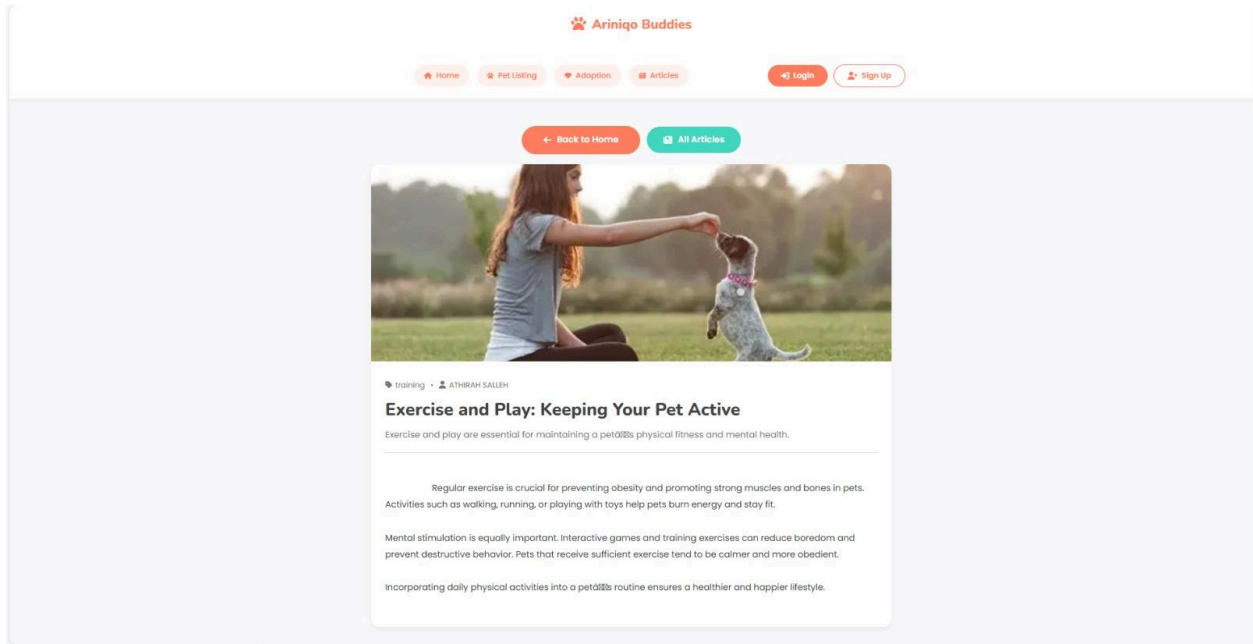

Figure 4.1.2 View Article Details Pages

When a user clicks the Read More button on the article list page, they are directed to the View Article Details page shown in Figure 4.1.2. This page provides a full-screen view of the selected content, featuring a large header image and the complete text of the article to ensure readers get all the details about pet care or rescue stories. To make navigation easy, we included a "Back to Home" button and an "All Articles" button at the top so users can quickly return to the main dashboard or browse other rescue topics without getting lost. Each article also displays important metadata like the category tag and the author's name, helping to keep our awareness platform organized and professional.

Figure 4.1.3 User Submit Articles Pages

In our system, users can also contribute to animal rescue awareness by writing their own stories or tips on the Submit Your Article page as shown in Figure 4.1.3. To start, you just need to fill in the Article Title and select a Category, like "Rescue" or "Training," so other users can easily find your post. You also need to provide your Name and Email, and write a Short Description that will act as a preview on the main articles list. In the Article Content box, you can type your full story or care guide, and there is even an optional field to add a Cover Image URL to make your post look more professional. Once you click "Submit for Review," your article is sent to the admin team to check before it goes live, which helps us make sure all the content on the platform is helpful and high-quality.

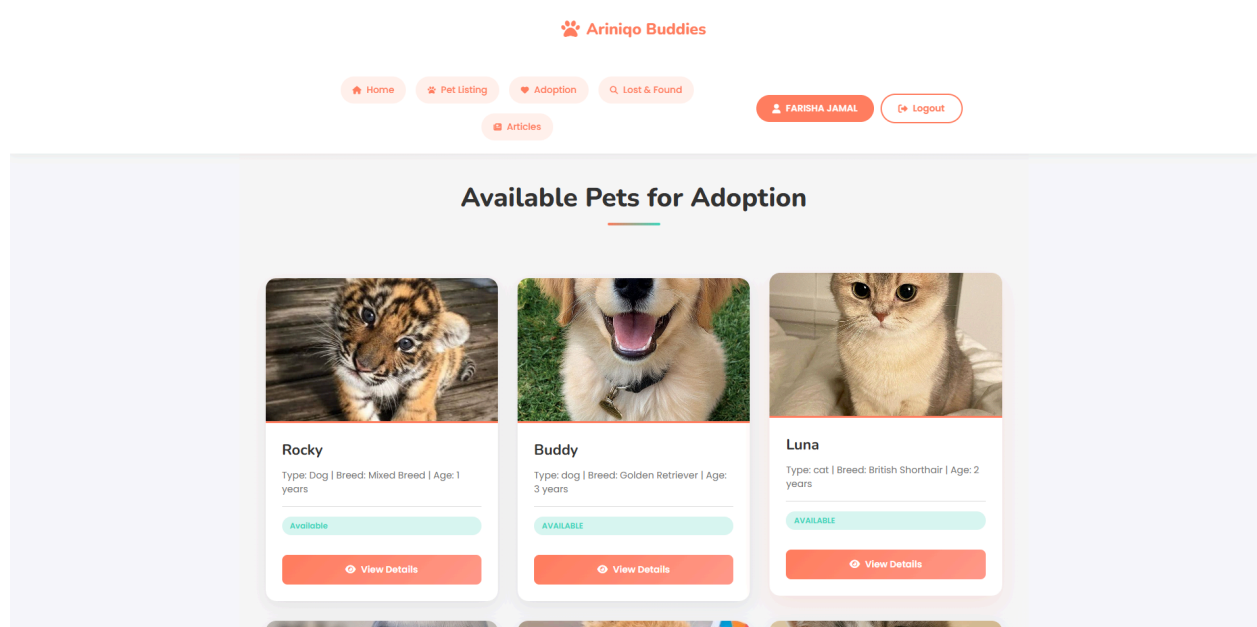

Figure 4.1.4 Pet Listing Pages

The Pet Listing page shown in Figure 4.1.4 is where users can go to see all the animals that are ready to be adopted. We made this page look very clean, with each pet having its own card that shows a cute photo along with their name, breed, and age. You can easily tell which pets are still looking for a home because there is a bright green "Available" badge on their profile. Instead of having to scroll through messy social media posts, users can just look at this organized list to find pets like Rocky the dog or Luna the cat. If you see a pet you like, you just need to click the "View Details" button to find out more about them and start the process of bringing them home.

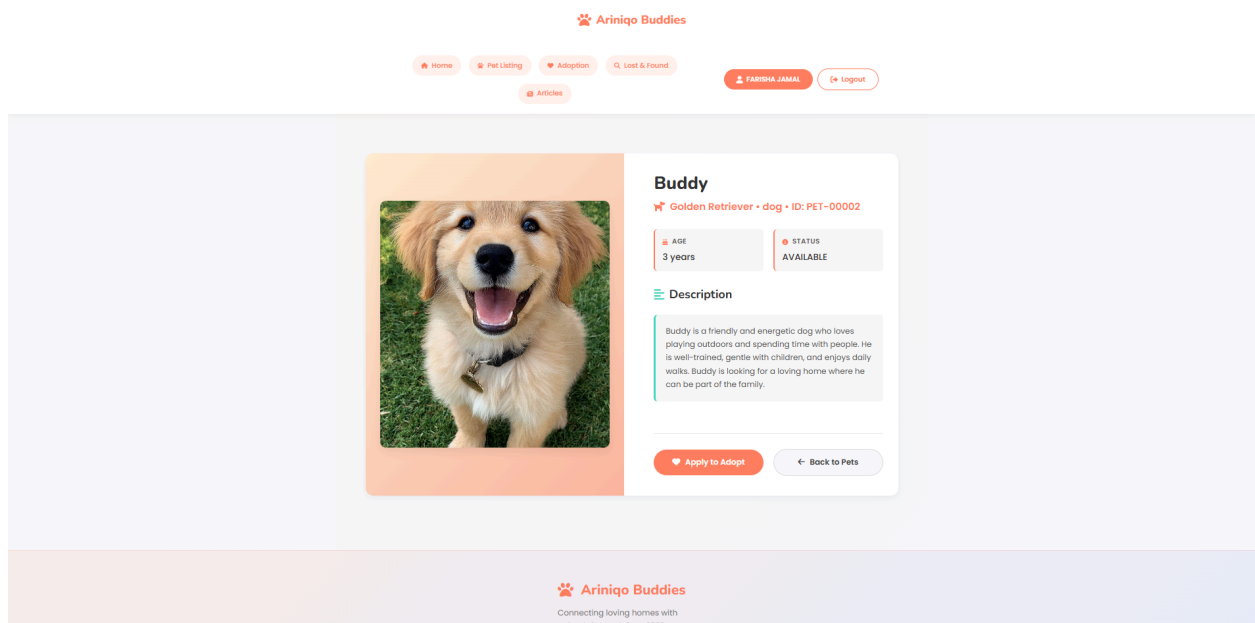

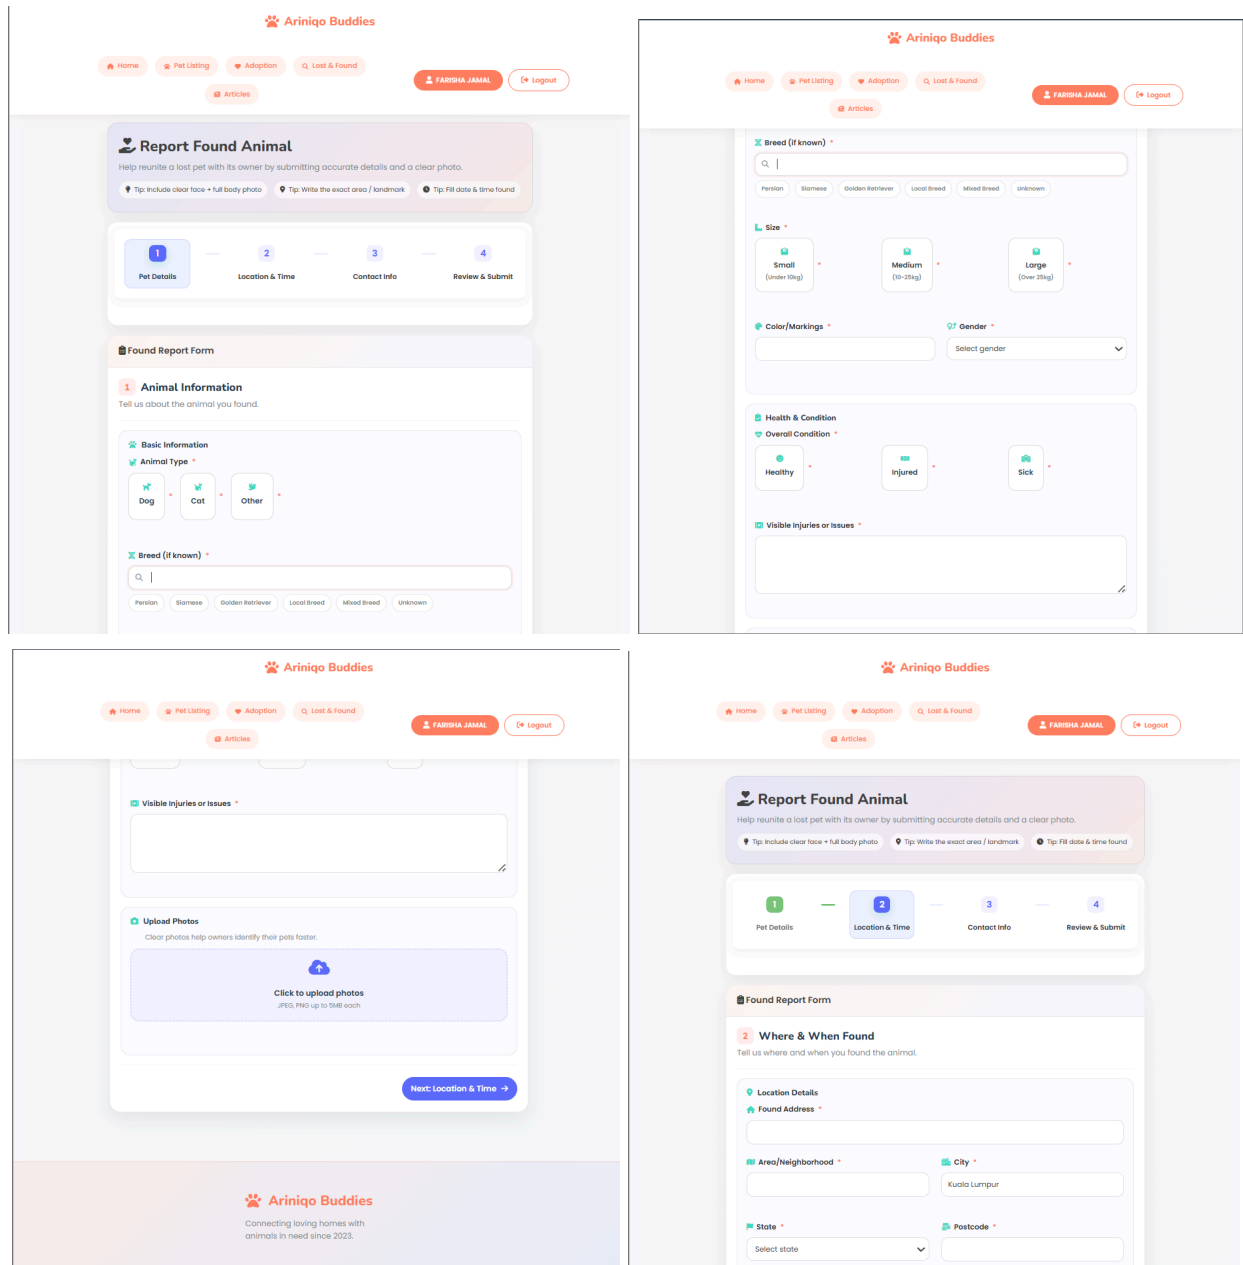

Figure 4.1.4 View Pet Details

The View Pet Details page shown in Figure 4.1.4 is where users can get a closer look at a pet before deciding to adopt them. This page is very easy to use because it shows a large, clear picture of the animal on the left and all the important details on the right, such as the pet's name, breed, and a unique ID like "PET-00002". It also lists the pet's age and has a status box that says "AVAILABLE" so the user knows the animal is still looking for a home. There is a Description section that explains the pet's personality, like how Buddy is a friendly and energetic dog who loves playing outdoors with people. If a user decides they want to adopt the pet, they can just click the orange "Apply to Adopt" button to start the application, or they can click "Back to Pets" to go back to the main list.

The screenshot displays the 'Adoption Application Form' on the Arinigo Buddies website. The form is titled 'Adoption Application Form' and includes a thank you message: 'Thank you for your interest in adopting a pet! Please fill out this form completely.' The form is divided into two main sections: 'Personal Information' and 'Living Situation'. The 'Personal Information' section includes fields for 'Full Name', 'Email Address', 'Phone Number', and 'Home Address'. The 'Living Situation' section includes fields for 'Housing Type', 'Pet Experience', 'Reason for Adoption', and a checkbox for 'I agree to provide lifelong care'. The form is titled 'Adoption Application Form' and includes a thank you message: 'Thank you for your interest in adopting a pet! Please fill out this form completely.' The Arinigo Buddies logo and navigation menu are visible at the top.

Figure 4.1.5 Page of Adoption Application Form

The Adoption Application Form in Figure 4.1.5 is used to collect all the necessary details to check if an applicant is a good match for the pet they want to adopt. To do this, the form includes a Living Situation section where users must select their housing type and explain their previous experience with animals. There is also a specific field for the Reason for Adoption, which allows the admin team to review why the person wants a pet and make sure they can provide a stable environment. By requiring users to fill out their Personal Information and agree to a lifelong care statement before clicking "Submit Application," the system creates a formal record that helps the organization screen every potential adopter properly.

The figure displays three sequential screenshots of the 'Report Found Animal' form on the Arinigo Buddies website. The top screenshot shows the 'Contact Info' step (Step 3) where users provide their contact details. The bottom-left screenshot shows the 'Review & Submit' step (Step 4) where users review the information they have entered. The bottom-right screenshot shows the 'Review & Submit' step (Step 4) where users review the information they have entered and click the 'Submit Found Report' button.

Figure 4.1.6 Report Found Animal Pages

The Report Found Animal page in Figure 4.1.6 uses a simple four-step process to help users report a pet they found so it can get back to its owner. The form is broken down into four parts which is Pet Details, Location & Time, Contact Info, and Review & Submit to make sure it is easy to follow. First, you just pick the animal type and describe its health, then you put in the exact spot and time you found it. After adding your phone number and email so the owner can call you, the last page lets you double-check everything before you click "Submit Found Report" to save it to the system. This organized way of doing things is much better than a messy social media post and really helps lost pets get home faster.

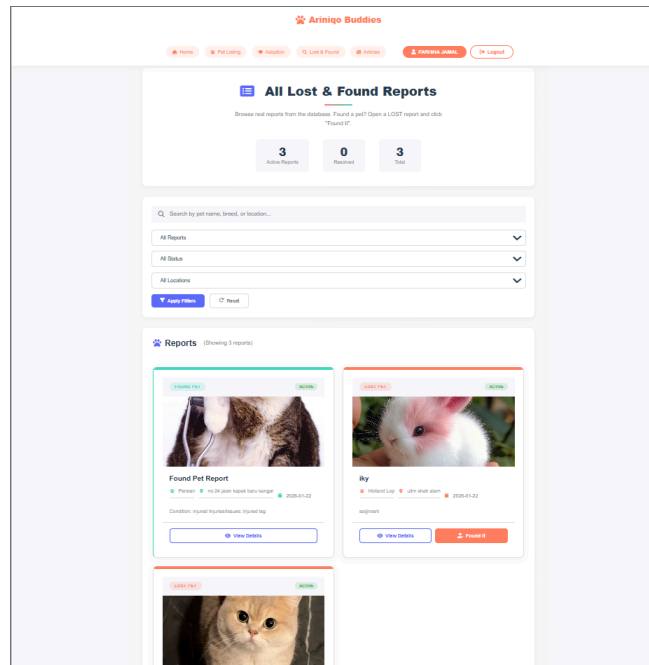

Figure 4.1.7 Page of View All Lost and Found Report

The All Lost & Found Reports page in Figure 4.1.7 is where users can look through all the pets that have been reported as missing or found. At the top, there is a simple summary box that shows the total number of reports and how many are still active, which helps users quickly see the current status of all cases. We also included a search bar and filters for things like pet type, status, and location so people can find a specific animal much faster. Each report is shown as a card with a photo of the pet, its breed, where it was last seen, and a status label like "LOST" or "FOUND". If a user sees a pet they recognize, they can click "View Details" to get more info or click the "Found It" button to help out. This page makes the whole process much more organized than scrolling through social media, giving everyone a better chance to find their missing pets.

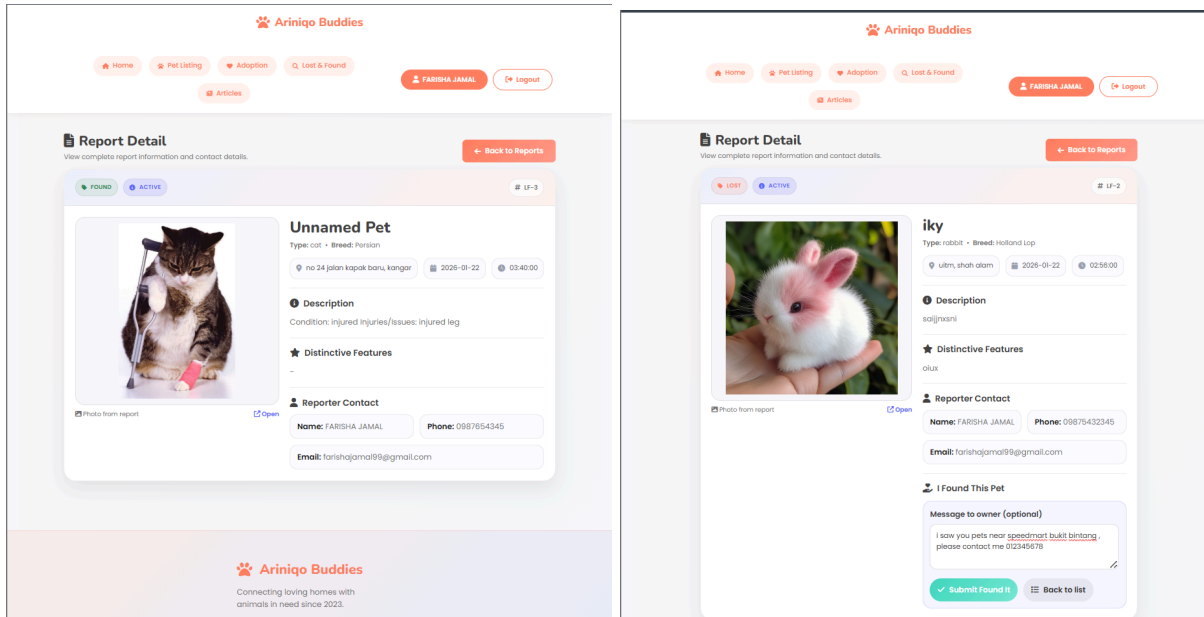

Figure 4.1.8 View the details of lost and found pet report

In Figure 4.1.8, the View the details of lost and found pet report page gives users a full look at a specific report to help them identify an animal. This page shows a large photo of the pet alongside details like its breed and the exact location, date, and time it was spotted. You can also read about the pet's health condition and any Distinctive Features that make it stand out. The reporter's name and contact info are listed at the bottom so people can get in touch easily. If a user has info on a missing pet, they can use the I Found This Pet box to send a message to the owner and click "Submit Found It" to help out. The page also clearly shows the current status of each case using color-coded tags, where an Active tag means the pet is still missing or waiting for its owner. Once the pet is found, the status is updated to Resolved so that users know help is no longer needed, which keeps the system organized.

4.2 ADMIN PERSPECTIVE

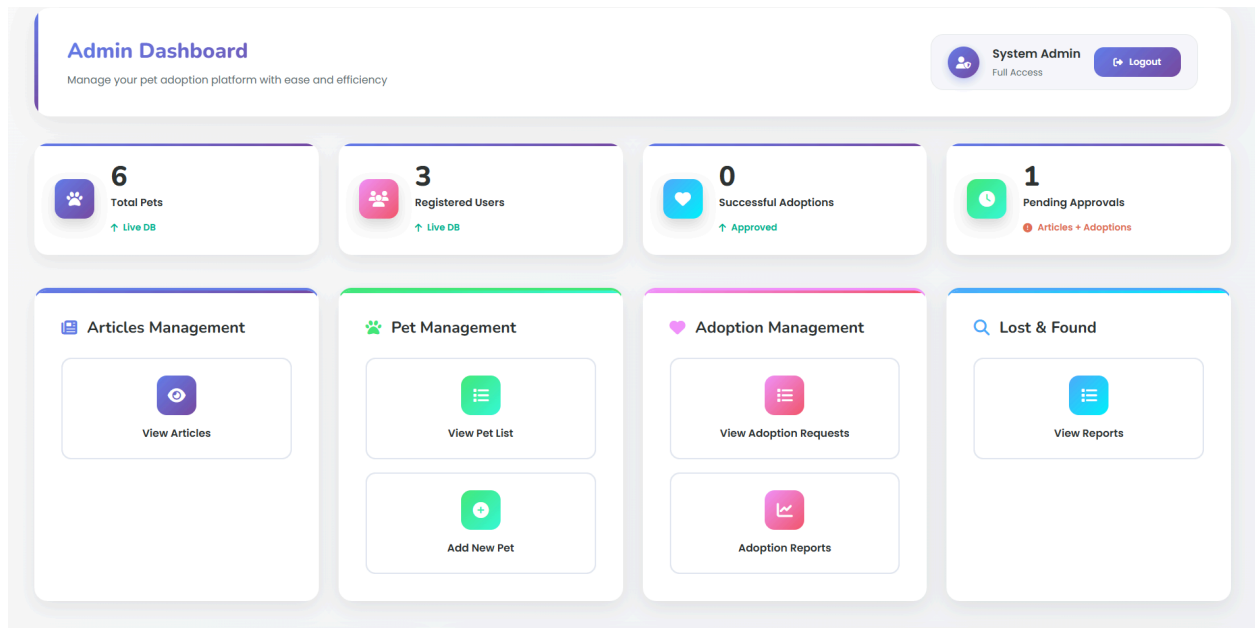

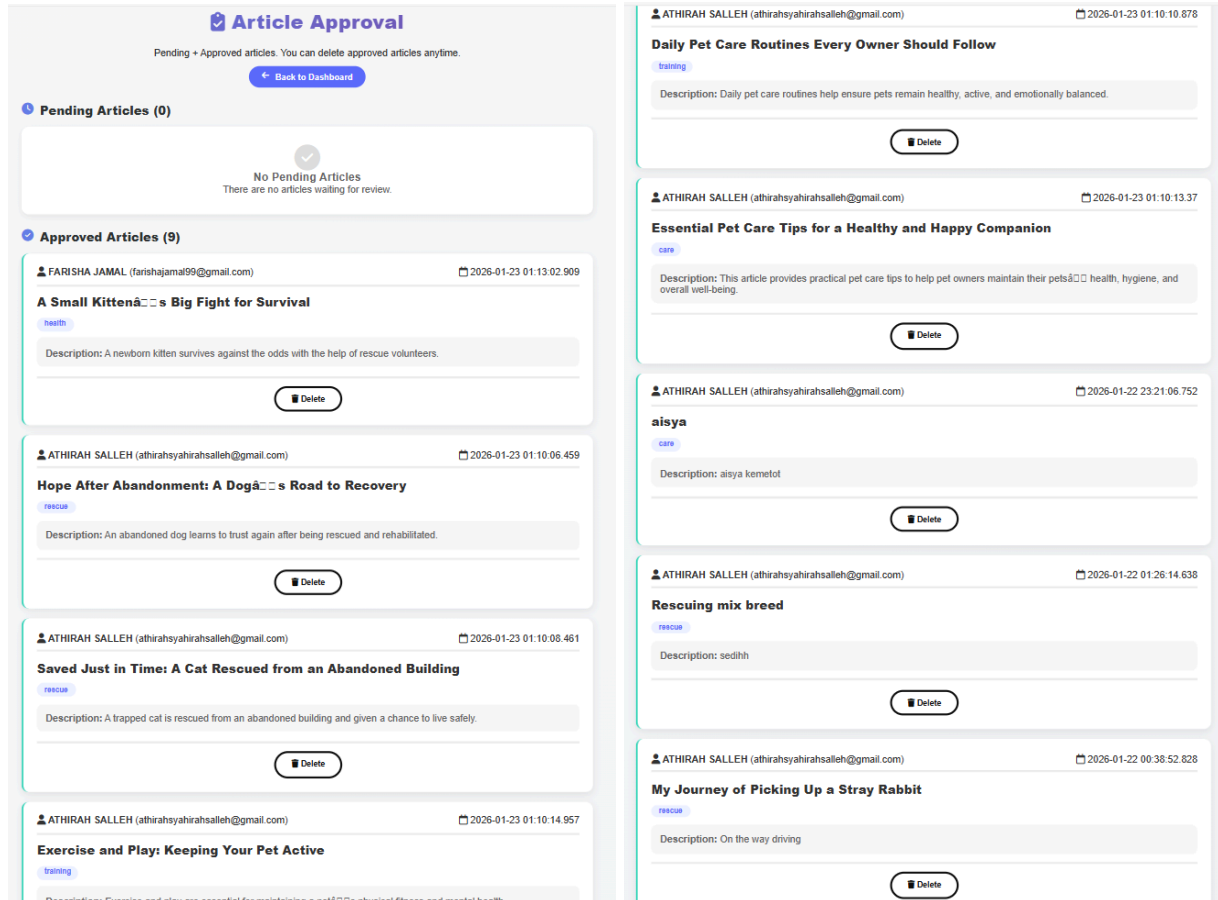

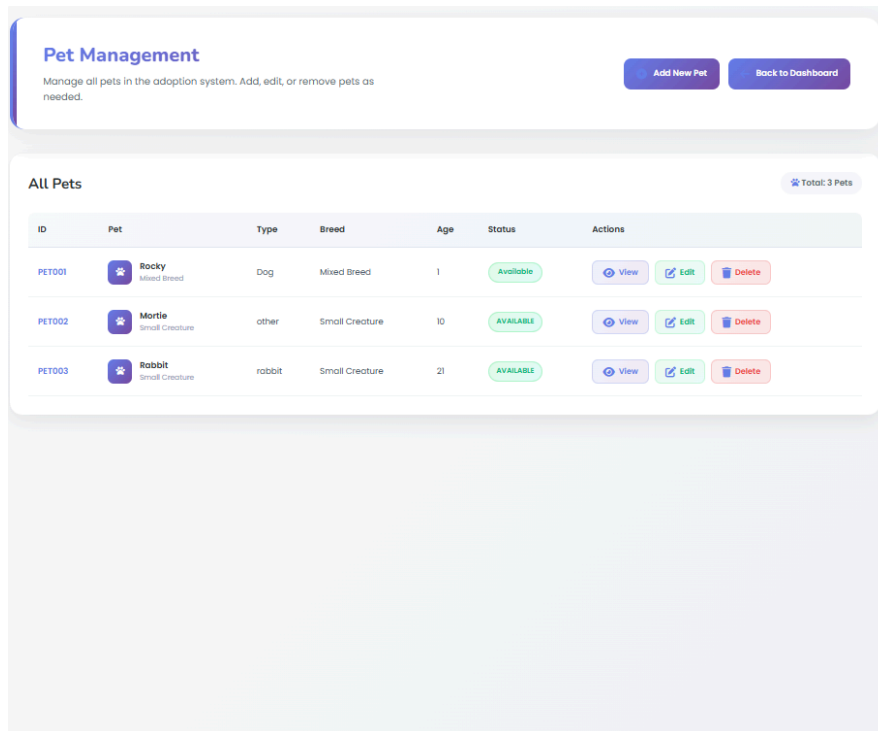

Figure 4.2.1 Admin Dashboard pages

In Figure 4.2.1, the Admin Dashboard page provides administrators with a clear overview of the pet adoption system to support effective system management. The page displays summary cards showing the total number of pets, registered users, successful adoptions, and pending approvals, allowing administrators to quickly monitor system status. It also offers quick access to key management functions, including Articles Management, Pet Management, Adoption Management, and Lost & Found, where administrators can view, add, and manage relevant records and reports. User role information and a logout option are shown at the top to ensure secure access. Overall, the dashboard is designed to improve efficiency by presenting important information in a well-organized and user-friendly interface.

4.2.2 Article Approval Pages

In Figure 4.2.2, the Article Approval page allows administrators to review and manage articles submitted by users before they are published on the platform. This page separates articles into pending and approved sections, enabling administrators to easily track the review status of each submission. For each article, key details such as the author's name, submission date, title, and description are displayed to support the review process. Administrators are provided with action buttons to approve, edit, or delete articles as needed, ensuring content quality and relevance. Overall, this page helps maintain reliable and appropriate information on the platform through a structured content moderation process.

4.2.3 Pet Management Pages

In Figure 4.2.3, the Pet Management page allows administrators to manage all pets registered in the adoption system efficiently. This page displays a table listing all pets along with important details such as pet ID, name, type, breed, age, and current adoption status, giving administrators a clear overview of available animals. Action buttons are provided for each record, enabling administrators to view detailed information, edit pet data, or delete pet records when necessary. At the top of the page, administrators can add new pets using the “Add New Pet” button or return to the dashboard using the navigation option. Overall, this page helps ensure pet information is well-organized, up to date, and easy to manage within the system.

Add Pet **Cancel**

4.2.4 Add New Pet Pages

In Figure 4.2.4, the Add New Pet page allows administrators to add new pets into the adoption system by entering complete and accurate pet information. This page includes a structured form that collects essential details such as the pet's name, type, breed, age, description, and adoption status, as well as an option to upload a pet image. Required fields are clearly marked to ensure all important information is provided before submission. Action buttons at the bottom allow administrators to add the pet to the system or cancel the process, while a navigation option at the top enables returning to the pet list. Overall, this page helps ensure that new pet records are consistently recorded and properly managed within the system.

4.2.5 Adoption Requests Pages

In Figure 4.2.5, the Adoption Requests page allows administrators to review and manage all adoption applications submitted by users. This page displays a table listing each request with details such as request ID, applicant information, selected pet, application date, and current status, providing a clear overview of all adoption activities. Action buttons are available for administrators to review applications in detail, approve suitable requests, or reject applications that do not meet the requirements. Approved and pending requests are clearly indicated using status labels, helping administrators track progress efficiently. Overall, this page supports a structured and transparent adoption approval process within the system.

4.2.6 Adoption Report Pages

In Figure 4.2.6, the Adoption Report page provides administrators with a complete overview of all adoption activities and decisions within the system. This page displays summary statistics showing the total number of applications, approved adoptions, rejected applications, and pending reviews, allowing administrators to quickly analyze adoption outcomes. Below the summary section, an adoption history log lists detailed records including date and time, application ID, applicant information, selected pet, and current status. A view option is provided for each record to allow administrators to review detailed adoption information. Overall, this page supports effective tracking, reporting, and evaluation of the adoption process to ensure transparency and proper record management.

3 user(s)

4.2.9 User Management Pages

In Figure 4.2.9, the User Management page allows administrators to manage registered users within the system. This page displays a table listing user details such as user ID, name, email address, and assigned role, providing a clear overview of all user accounts. Action buttons are available for administrators to edit user information or delete user accounts when necessary. A navigation option is provided to return to the dashboard. Overall, this page supports effective user administration by ensuring user roles and account information are properly maintained and controlled.

5.0 CONCLUSION

The Pet Adoption & Animal Rescue System was created to resolve issues regarding how to manage the process of adoption, as well as raising awareness about rescues, and helping to report lost/found pets. A central and organized way to give users accurate information about pets, think about what type of pet would suit their lifestyle, apply for adoption, view and add articles of awareness, and report missing or found animals.

The implementation of the system using JSP & MVC architecture provides improved organization, security, and scalability for managing data. The separation of users and administrators helps control and manage all aspects of the system, including the management of pets, reviewing and approving articles, and responding to requests for adoption. As a result, the workload for staff is reduced, and there are fewer errors in the record-keeping process, but improved operation productivity.

As such, the Pet Adoption & Animal Rescue System provides improved operational effectiveness, increases awareness for animal welfare, and encourages responsible ownership of pets. The system has the ability to further improve in the future by incorporating more features such as notification systems, real-time tracking, and better reporting capabilities to assist animal rescue organizations and the surrounding communities.
