Introduction

- Animal welfare is a growing concern due to the increasing number of abandoned and stray animals.
- Pet adoption and rescue activities are often managed manually or through unstructured platforms.
- These methods make it difficult to manage adoption processes and rescue information efficiently.
- The Pet Adoption & Animal Rescue System provides a centralized, web-based platform for adoption and rescue management.
- The system allows users and administrators to manage pet adoption, awareness articles, and lost-and-found reports efficiently.

Problem Statement

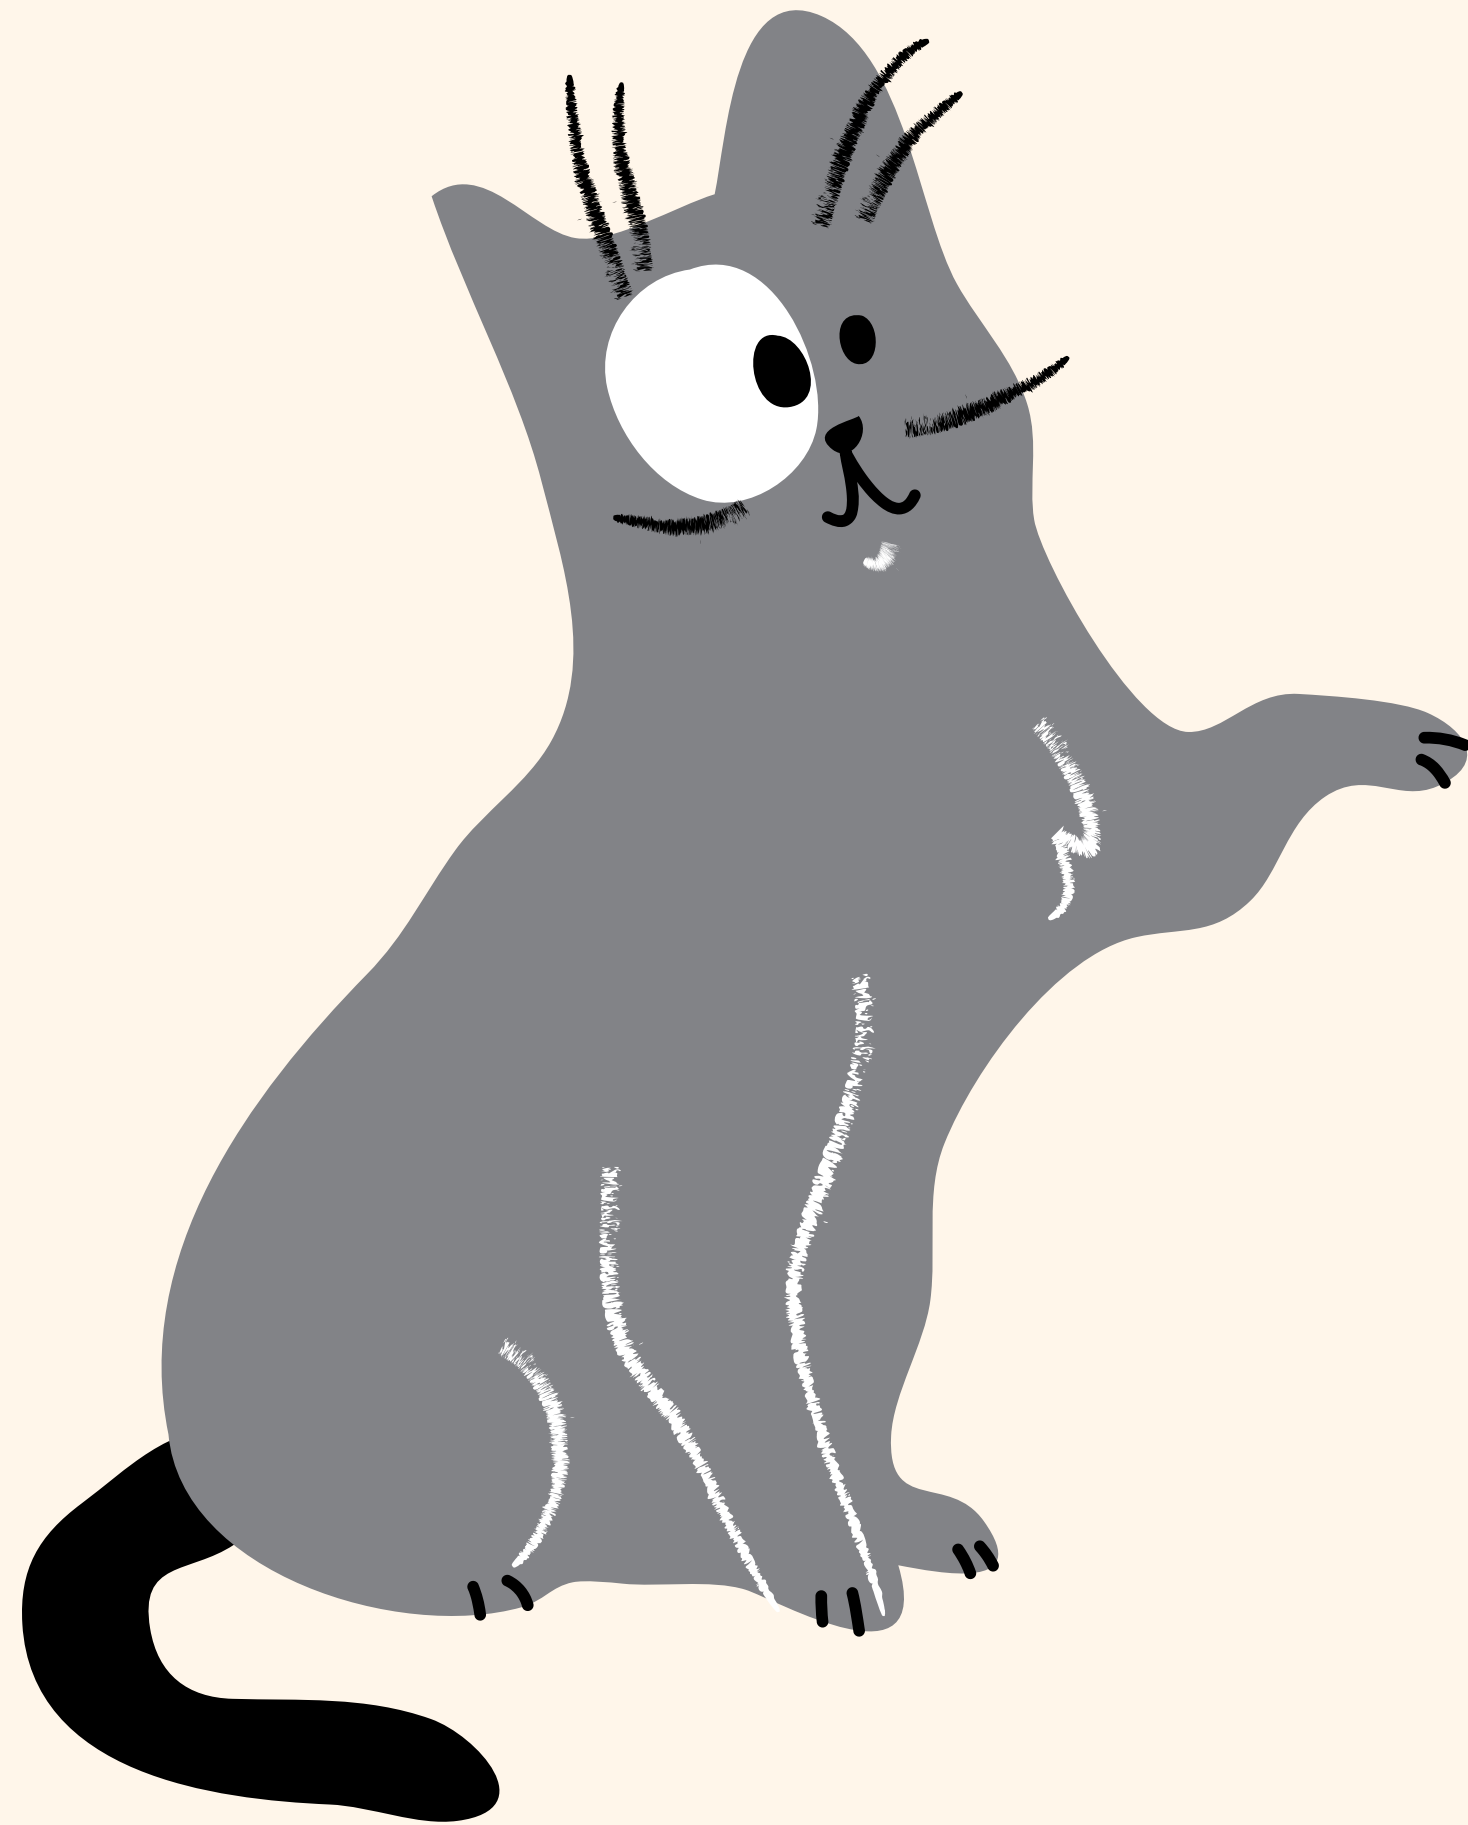

- Unstructured Pet Adoption Process
- Lack of Centralized Awareness and Reporting System
- Inefficient Administrative Management

Objectives

- To develop a web-based system that provides a centralized platform for managing pet adoption and animal rescue activities.
- To allow users to view available pets, submit adoption applications, and report lost or found animals in an organized manner.
- To enable administrators to manage pet information, review adoption requests, and approve rescue awareness articles efficiently.

System Demonstration

Conclusion

- The Pet Adoption & Animal Rescue System provides a centralized platform for managing pet adoption and rescue activities.
- The system improves efficiency by organizing adoption requests, awareness articles, and lost-and-found reports.
- Role-based access allows users and administrators to perform tasks effectively and securely.
- Using JSP and MVC architecture enhances data management and system structure.
- Overall, the system supports animal welfare and promotes responsible pet ownership.
